# Investment Practices

Maldives Retirement Pension Scheme (MRPS)

Mohamed Hussain Maniku CEO, Maldives Pension Administration Office

#### Member Profile and Contributions

- Positive Net Contributions:
- Monthly Contributions (net) from the members in the tune of MVR75 Million
- Biggest Challenge:
- How to generate positive returns until members retire?

#### Fund Choices for Members

- The Following Funds are available for members during the contribution phase;
  - Investment Fund
  - Sharia Fund

- At retirement members funds are switched to conservative funds;
  - Conservative Fund
  - Sharia Conservative Fund

#### Investment Mandate

- The Pension Act specifies allowable and prohibited asset classes
- Statement Investment Principles adopted by Board
- Investment Committee
  - Investment Policy and Strategy
  - Oversees the policy implementation by the investment team

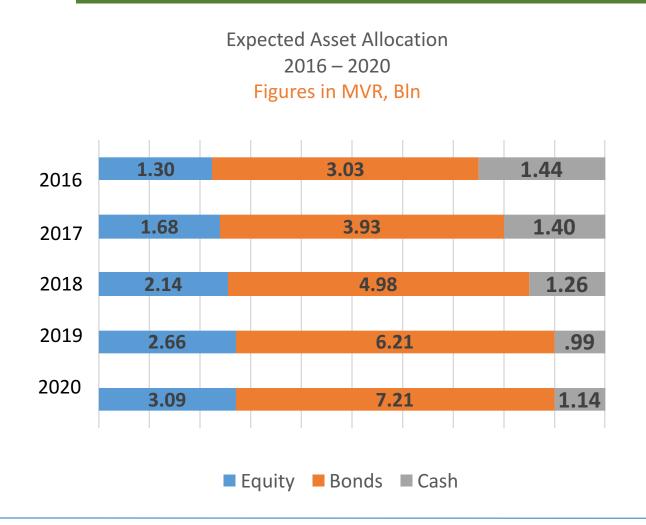

## **Investment Strategy**

• The investment strategy is based on generating maximum return to the participants of MRPS taking into consideration diversity, security and liquidity of assets in which MRPS invests in.

- The investment objectives of MRPS will be achieved by investing in the following asset classes locally (conventional and Sharia).
  - Listed Equity and Bonds/Sukuk
  - Government Securities
  - Mutual and Investment Funds
  - Bank Deposits

## **Expected Strategic Asset Allocations**

- This is an ambitious asset allocation strategy
- However, this would prevent MPAO having constrained by its own rules when opportunities are present
- Opportunities are difficult to forecast in a market like Maldives
- We are having interests from large investees in a scale we have not thought about in 2016

## Diversification Challenges

- Limited Financial Market Activity
  - The total market capitalization of MSE is MVR 8.1 Billion (USD 535 Million)
  - free float is just above 26% of the total issued capital.
  - The trading volume is also very low. The market is illiquid.
  - Except for Dhiraagu, BML and STO, the market capitalization is too small for MPAO to invest. The candidate companies would then be Dhiraagu, BML and STO.
    - The total market capitalization of these three companies would be in the order of MVR 7.02 Billion (95% of the total market capitalization of the MSE).
- Limited Sharia Investments
- Single asset class reliance (over 90% exposed to Govt. Debt)

## Investment Implementation

**Investment Compliance and Internal Audit Division** 

- Daily Reconciliation funds
- Updating Member Registry
- Member Statements

**Operations Division** 

#### Finance and Fund Management Division

- Investment Research
- Trade Execution
- Accounting
- Valuation
- NAV, Fund Price
- Financial Reporting

### Asset Classes Over the Years
